

AI, Strategy and Data Design for Organisations Building the Future

NECESSITYINK works with organisations at two stages of the same journey: those modernising legacy systems and those already rich in data looking to build something new.

We combine AI, strategy and data design to help teams analyse, communicate and productise their data – through reporting tools, marketing experiences and entirely new data-driven products.

If any of this sounds familiar, we can help.

Most organisations struggle with the same challenge: turning complex data into something people can actually use.

[Explore Our Solutions](#)

You have data, but no clear way to turn it into insight or communication.

Reporting, dashboards, and data visualisation systems.

You want to use data or AI in a campaign, product or experience.

Data-driven marketing, installations, sonic branding, digital activations.

You have an idea but need a prototype before pitching internally or to investors.

Rapid prototyping, proof-of-concept builds, AI experiments.

You're sitting on complex data and need specialists to make it usable.

Data strategy, machine learning, visualisation systems.

You want to explore the creative potential of AI, algorithms or machine learning.

AI-driven products, custom tools, data intelligence systems.

You want to build something new powered by data.

Product design, software, apps and custom platforms.

How we help organisations work with complex data.

STRATEGY

Make sense of your data before you build anything.

We help organisations define how data, AI and algorithms should be used across products, communications and internal systems. From early exploration to technical roadmaps, we turn complex possibilities into clear strategies your team can execute.

Includes:
Data strategy, AI opportunities, Concept development, Prototyping roadmaps, Innovation consulting

REPORTING

Turn complex data into clear insight and communication.

We design systems that help teams analyse, interpret and present data in ways people actually understand. From dashboards to public-facing reports, we make information accessible, accurate and design-forward.

Includes:
Dashboards, Data visualisation, Reports, Monitoring systems, Interactive tools

MARKETING

Use data as a powerful storytelling and brand asset.

We transform datasets into campaigns, experiences and content that communicate ideas in compelling ways. Data becomes something audiences can see, hear and interact with.

Includes:
Data-driven campaigns, Sonic identity, Brand activations, Digital experiences, Installations, Motion and generative design

PRODUCT

Build tools, platforms and experiences powered by data.

We partner with organisations to develop original products and services driven by data, AI and machine learning. From early prototypes to full production systems.

Includes:
Product design, Custom software, AI tools, Machine learning systems, Interactive platforms

Trusted by leading brands and organisations

Selected collaborations across technology, culture and global brands.

Use our **Smart Brief Builder** to tell us about your project. Our system analyses your requirements and generates a tailored proposal within 48 hours.

Used by teams preparing pitches, innovation proposals and new product ideas.

Most of our clients fall into two situations

[Book a Call](#)

They either need to modernise how they work with data, or they're ready to build something new with it.

Organisations modernising legacy systems

You have valuable data but your current tools, reports or workflows no longer reflect the complexity of your organisation. You're looking for a future-focused partner who can modernise how data is analysed, communicated and used – without disrupting existing systems.

We typically help with:

- Data strategy and reporting systems
- Dashboards and visualisation frameworks
- Data communication and public reports
- Internal tools for analysing complex datasets

Examples include cultural institutions, research organisations and established global brands.

Organisations modernising legacy systems

You already work with data and technology, and you're exploring new ways to turn that data into products, experiences or brand assets. You're looking for a partner who understands AI, machine learning and design, and can help realise ambitious ideas.

We typically help with:

- Data-driven products and platforms
- AI and machine learning experiments
- Data-driven marketing and brand activations
- Prototypes and proof-of-concept builds

Examples include technology companies, innovation teams and forward-thinking brands.

Flexible pricing for different types of projects

[Book a Call](#)

Projects vary in scale, complexity and timeline. We offer three pricing models depending on how you want to collaborate.

1 – One-off projects

Best for defined ideas and deliverables

A structured project with a clear scope, timeline and outcome. Ideal for reports, visualisations, prototypes, campaigns or installations.

Includes:

- Defined scope and deliverables
- Dedicated project team
- Clear timeline and milestones
- Fixed project fee

Starting from: £8,000

Typical timeline: 2–12 weeks

2 – Retainer partnerships

Best for organisations working with data regularly

An ongoing collaboration where NECESSITYINK becomes your data design and AI partner. Ideal for teams that need continuous support across reporting, product development or campaigns.

Includes:

- Priority access to our team
- Monthly strategic and creative support
- Iterative development
- Flexible use across projects

Starting from: £3,000/month

3 – Productised packages

Best for fast prototypes and smaller initiatives

Defined service packages designed to help teams quickly explore ideas or test new concepts.

Includes:

- Rapid prototyping
- Data exploration and concept design
- Technical feasibility testing
- Clear deliverables within short timelines

Starting from: £2,500

Typical timeline: 1–3 weeks

Most teams start with a short project or prototype before expanding into larger collaborations.

Frequent Asked Questions

Everything you might want to know before starting a project with NECESSITYINK

[Book a Call](#)

How much does a project cost?

Costs vary depending on scope, complexity and timeline.

Most projects start from £8,000, while smaller prototypes or exploratory work can start lower. Long-term collaborations are also available through monthly retainers.

You can receive a tailored estimate using our brief builder, usually within 48 hours.

How long does a project take?

It depends on the scope, including environmental data, behavioural data, cultural archives, sensor data – typically take 1–3 weeks, while larger projects such as reporting systems, campaigns or installations usually take 4–12 weeks.

More complex collaborations or product development can extend beyond that timeline.

How do we get started?

The easiest way is to complete the brief builder or book a short call with our team.

We'll review your idea, clarify the scope and recommend the most suitable approach for your project.

Getting Started

Can you help develop or sense-check my idea?

Yes. Many projects start with an idea that needs to be explored, refined or tested.

We can help you sense-check the concept, evaluate the technical feasibility and build a prototype to demonstrate the idea before committing to full production.

Can you build a prototype to test an idea?

Rapid prototyping is often the best way to explore a concept before committing to a full project. We regularly develop proof-of-concept prototypes for internal presentations, pitches and early product exploration.

Can you help develop a pitch or proposal based on our idea?

Yes. We often collaborate with organisations preparing internal proposals, funding applications or innovation pitches by developing prototypes, visuals or supporting concepts.

We need to launch a product or campaign. Can you help?

We can support campaigns and launches by transforming data into visual content, experiences, digital assets or installations that communicate ideas in compelling ways.

Data, Security & Confidentiality

How do you handle confidentiality and data security?

We regularly work with sensitive datasets and confidential information. Non-disclosure agreements can be signed before sharing data, and all project materials are handled using secure workflows agreed with the client.

We regularly work with confidential datasets and sensitive information.

Services & Capabilities

What services do you offer?

NECESSITYINK helps organisations work with complex data through four main areas: strategy, reporting, marketing and product development.

This includes data strategy, dashboards and visualisation systems, data-driven campaigns, AI and machine learning experiments, digital experiences, installations and custom tools.

What data do you work with?

We work with many types of datasets, including environmental data, behavioural data, cultural archives, sensor data – research data and business analytics.

If the data can be analysed or structured, it can usually be visualised, interpreted or transformed into a meaningful experience.

What if we don't have data yet?

That's common. We can help define what data should be collected, design data collection methods, or identify existing datasets that can support the project.

Do you offer training or workshops?

Yes. We offer workshops and training sessions on topics such as data visualisation, data sonification, AI experimentation and creative uses of data.

Do you collaborate with artists or creative practitioners?

Yes. Depending on the project we collaborate with a network of designers, developers, sound artists and technologists who contribute specialist expertise.

Pricing and Ongoing Support

Do you offer support after delivery?

Yes. We can provide ongoing support, updates or technical maintenance depending on the project. Many organisations choose to continue working with us through a retainer.

What if we're not happy with the result?

Projects are developed through a structured process with checkpoints and feedback stages, which helps ensure the outcome aligns with expectations.

We work closely with clients throughout the process to refine and adjust the work where needed.

Process & Collaboration

Who will be working on the project?

All projects are led by Tiziana Alloci, founder and creative director of NECESSITYINK.

Depending on the scope, projects are produced in collaboration with a trusted network of developers, designers, engineers and specialists coordinated through the studio.

How involved will I need to be?

We usually work in a collaborative way, especially during the early stages of the project. Clients typically contribute insight, data and feedback at key moments, while our team manages the design, technical development and production.

Can you work directly with our internal team?

Yes. We often collaborate closely with internal teams including design, product, marketing and research departments.

Which time zones do you work in?

NECESSITYINK operates primarily from London (GMT) but regularly collaborates with teams across Europe, Asia and North America.

Can you attend meetings, workshops or events in person?

Yes. We regularly participate in workshops, project meetings and events both remotely and in person when required.

Do you support installation or setup?

Yes. For projects involving installations, exhibitions or live activations we can support technical setup, coordination and launch.

Organisations We Work With

Do you work with NGOs or cultural institutions?

Yes. We collaborate with a wide range of organisations including cultural institutions, research centres, NGOs and global brands.
